

0.0.1 Map

The *map* operation takes in a function $fn?$, Collection $coll?$ and additional Arguments $args?$ (as necessary) and returns a modified Collection $coll!$ with members $fn!_n$. The ordering of $coll?$ is maintained within $coll!$

$$\begin{array}{l}
 \frac{map[(_ \rightarrow _), Collection, V] \quad \text{-----}}{
 \begin{array}{l}
 fn? : (_ \rightarrow _) \\
 args? : V \\
 coll?, coll! : Collection \\
 map_ : (_ \rightarrow _) \times Collection \times V \rightarrow Collection
 \end{array}
 } \\
 \hline
 \begin{array}{l}
 coll! = map(fn?, coll?, args?) \bullet \\
 \langle \forall n : i..j \in coll? \mid i \leq n \leq j \wedge j = \# coll? \bullet \\
 \exists_1 fn!_n : V \mid fn!_n = \\
 (fn?(coll?_n, args?) \iff args? \neq \emptyset) \vee \\
 (fn?(coll?_n) \iff args? = \emptyset) \rangle \Rightarrow fn!_i \cap fn!_n \cap fn!_j
 \end{array}
 \end{array}$$

Above, $fn!_n$ is introduced to handle the case where $fn?$ only requires a single argument. Additional arguments may be necessary but if they are not ($args? = \emptyset$) then only $coll?_n$ is passed to $fn?$.

$$\begin{array}{ll}
 X = \langle 1, 2, 3 \rangle & \\
 map(succ, X) = \langle 2, 3, 4 \rangle & [\text{increment each member of } X] \\
 map(+, X, 2) = \langle 3, 4, 5 \rangle & [\text{add 2 to each member of } X]
 \end{array}$$
